

Window Cloth

The beauty of glass is that it allows light to travel through it easily. Traditional cleaners will reside on the glass and restrict light from passing through.

While it is important to have a cloth that will remove greasy marks it is also important to make sure that nothing is left behind that causes streaks or smears.

A smear is a contaminant (something not meant to be on the surface) that has been spread in an effort to remove and clean the surface that now causes distortion of light. It is invisible in low light situations like internal glass or mirrors; however, in high light situations the distortion of light is noticeable and reveals where you have attempted to clean.

With the Norwex Window Cloth, there is no need for chemical glass cleaners - just use water. The antibacterial properties of this cloth makes it great for use in your entire home, such as:

- * Windows
- * Mirrors
- * Bath tubs
- * Shower doors
- * Vanity units
- * Knick-knacks and all other shiny surfaces in the home
- * Crystal
- * Glass tables
- * Granite benchtops
- * Brushed and stainless steel
- * Chrome

To clean glass

To remove fingerprints simply spray with water and wipe with the window cloth.

To clean stainless steel

Use slightly moist (very little water) and wipe the stainless steel in the same direction as the grain. For heavily-soiled fridges, first clean with a moist Enviro Cloth, then finish with the Window Cloth in the same direction as the grain.

To clean granite benchtops

Clean benchtops first with the Enviro Cloth and water. Then finish the benchtops with the Window Cloth unfolding to a new side to ensure you are always finishing with a dry, clean area of microfibre.

* Not recommended for use on surfaces with anti-glare coating.

Window Cloth

Step 1

Spray water on the glass using the Norwex Spray Bottle or wipe with a moist Enviro Cloth to remove dirt and debris.

Step 2

Fold the cloth to give you sixteen sides and start wiping.

Step 3

Continue to unfold the cloth to new sides to ensure you are finishing the surface with a clean side at all times.

Step 4

For heavily-soiled glass or surfaces, clean first with the Enviro Cloth and water, then finish with a dry Window Cloth.
